

Guide lines for logo pacifiers:

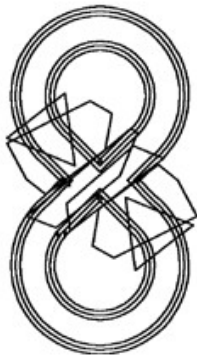

For pacifier logo graphics, all files must be Vector and as single layer only - that is, no overlapping layers. When viewing in preview mode, no lines can crisscross.

Example of vector qualities. All objects of a given color must be welded together.

Gradations cannot be imported for logo pacifiers as we engrave as a solid shape (spot color).

Digital Layout Guideline

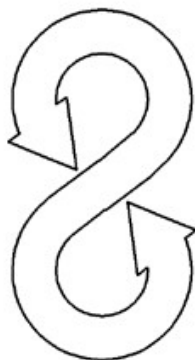

Wireframe/Artwork

Preview/Final

Without artwork charges this would be unacceptable for vinyl output. For digital full color, this file would work perfectly.

optimal

NOTE: Although the printed output of both versions of artwork are identical, the examples on the left show how the original artwork is very different. The top left model cannot be processed for a computer-cut vinyl lettered due to overlapping objects.
